

FINISHER OF CHOICE!™

Beautify & Restore Your Existing Commercial or Residential Building

Linetec offers field service and restoration capabilities which can bring your commercial and residential buildings back to their original splendor.

Whether your buildings finish has faded and discolored, or your new building has been damaged during construction, we can correct it.

Storefronts and other high traffic areas need to be repainted periodically. As good as it is, painted aluminum is not completely maintenance free, nor does it last forever. Painted aluminum can chip and scratch on high wear areas such as sliding doors and entrance ways.

Linetec's fully-staffed field service team utilizes Kynar®/Hylar® coatings that meet the highest performance standards to refinish the building's exterior or interior, including such metal structures as:

- | | |
|-------------------|---|
| windows and doors | architectural panels and accents |
| fences and gates | site furnishings |
| curtain walls | cladding |
| storefronts | roofing and fascias |
| skylights | canopies |
| railings | and a wide variety of other metal structures. |

Linetec specializes in the repair of construction damage, including bondo repair for dents and miss drilled holes, as well as refinish of premature chalk and fade. The field service team will do repairs or repaint day or night, around the buildings schedule.

As the country's leading and largest factory applicator of architectural spray finishes, Linetec is unique in our ability to offer restoration services of unparalleled quality. Our professionals possess the knowledge and skill to confidently guarantee the projects compliance to the AAMA High Performance Organic Coatings Specification.

For more information on our on-site finishing capabilities visit www.linetec.com or contact us at sales@linetec.com or 715-846-3714.
